

AIR DRYING TECHNOLOGY

The Air Drying technology involves exposure of products to heat by passing hot air through the material in order to reduce the moisture level.

FREEZE DRYING

The Freeze Drying technology, also known as Lyophilization, is a dehydration process where the moisture content of the product is removed by sublimation retaining its natural and original taste, shape, aroma, texture, flavor and nutritional values.

ENHANCED VACUUM DRYING (EVD)

EVD process is a technology that leads to high-quality final products by removing the moisture at low temperatures and under reduced pressure environment. With the EVD technology we manage the preservation of the organoleptic characteristics of the fresh material giving a more natural character to the final product and minimizing the possibility of oxidation reactions.

INDIVIDUAL QUICK FREEZING (IQF)

IQF is a technology that allows the freezing on an individual piece of product separately from the others. This process ensures that the shape, the color, the smell, and the texture of products are retained as they are.
